1-800-876-0036

About Sterling Sterlco: *Sterling Engineering Company (Sterl Co) was established in 1916. Today, Sterling provides the largest line of heating and cooling TCUs while Sterlco® offers a variety of steam control products to keep your system running smoothly. Sterling Sterlco Temperature Control Systems and Steam Control Products produce technologies that help you optimize uptime, efficiency, and productivity.*

Temperature Control Valves Steam control products help maintain temperature, flow, and pressure to maximize productivity. Sterlco self-modulating Temperature Control Valves are temperature actuated, self-powered, and fully balanced for heating or cooling processes using water, oil, steam, or other fluids.

Control and protection are critical to the success of your operation. Sterlco's simple, efficient design requires minimum maintenance. Heavy-duty construction assures long valve life for commercial and industrial HVAC, food, beverage, pharmaceuticals, hospitals, schools, power utilities, refineries and petrochemical applications.

Y Strainers: Models 18-Y and 20-Y Pumps, control valves, traps or any other equipment controlling the flow of liquids or gases require proper protection with strainers for trouble-free operation. Sterlco Sterling strainers are engineered for water or steam, and are adaptable for many other uses.

Cleaning is accomplished by simply removing a pipe plug without disconnecting any piping. Or if it is desirable to clean without interrupting service, a blow-off valve can be connected to the cleanout opening.

Radiator Valves feature practical styling for steam or hot water heating systems. **Steam Traps** are preferred for efficient, economical vacuum and pressure service. **Portable Chillers** feature a unique design that simplifies service and maintenance. A wide range of water and hot oil **Temperature Control Units** are available to suit your injection molding, blow molding, extrusion, or other industrial process needs.

Steam Traps: F&T, Radiator, Inverted Bucket

TCUs (Temperature Control Units)

Sterling Chilled Water Series Pump Tanks

Boiler Feed Pumps: 4600 steel, 4700 cast iron, and 4800 SS Series Boiler Feed Units. Sterlco® atmospherically vented boiler feed tanks are designed to supply water to the boilers to maintain water supply at various operating loads.

These units can be paired with a Sterlco **K-Series 2' NPSH Pump**. NPSH Pumps are designed to pump hot condensate up to 212° F. These pumps are equipped with a stainless steel impeller and inducer to assure long operating life. Customizable tanks and specialty pump options are available.
